

Transactions of the Pathological Society of London Volume 8 (Paperback)

By Pathological Society of London

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1857 edition. Excerpt: .inclined to adopt the view of Mr. Shaw, in consequence of the regularity of the concentric laminae completely round the nucleus, causing it to resemble the successive mineral deposits round a centre, so common in urinary calculi. The coagulating action of fat on albumen was first shown by Acherson, and readily explains how one of the appendices epiploicee, should it become loose, would be immediately coated with albuminous matter. Subsequently successive layers of albumen would collect upon it, and cause its enlargement. The living appendices, it is true, do not produce these concretions, but we have every reason to believe that all dead, floating organic matters, especially if fatty, do, as has been recently observed in the Lithopaedium, so well described by Geuns and Schrant, of Amsterdam. The mineral degeneration of Over Bailcnbaarinderligko Zwangerschap. --Amsterdam, 1855. the nucleus, however, appears to be more probably...
