As equity analysts mostly work for well-known financial institutions, their forecasts and recommendations are widely regarded as authoritative. Many institutional and private investors rely heavily on the broker reports issued by equity analysts when making their investment decisions. This confidence in equity analysts is highly dependent on the assumption that these individuals act rationally - i.e., that their forecasts and recommendations do not suffer systematic biases. Unfortunately, however, there is a great deal of scientific evidence that analyst opinions do indeed suffer from a number of systematic biases, distorting their earnings forecasts and investment recommendations. Some of these biases lead analysts to be too optimistic: for instance, they may gain privileged access to a firm's senior management and thus to superior sources for...
